Elexeo

gymna

## The flexibility your practice needs

No patient is the same in your practice. Whether you work with professional athletes, the elderly, or people in rehabilitation: your treatment strategy must be flexible and purposeful.

Elexeo is specially designed to adapt to the needs of your practice. This modular platform adapts to you – not the other way around..

Elexeo fits. Today,  
tomorrow, and far  
into the future.

# Why choose Elexeo?

Solutions for the real pain points in your practice.

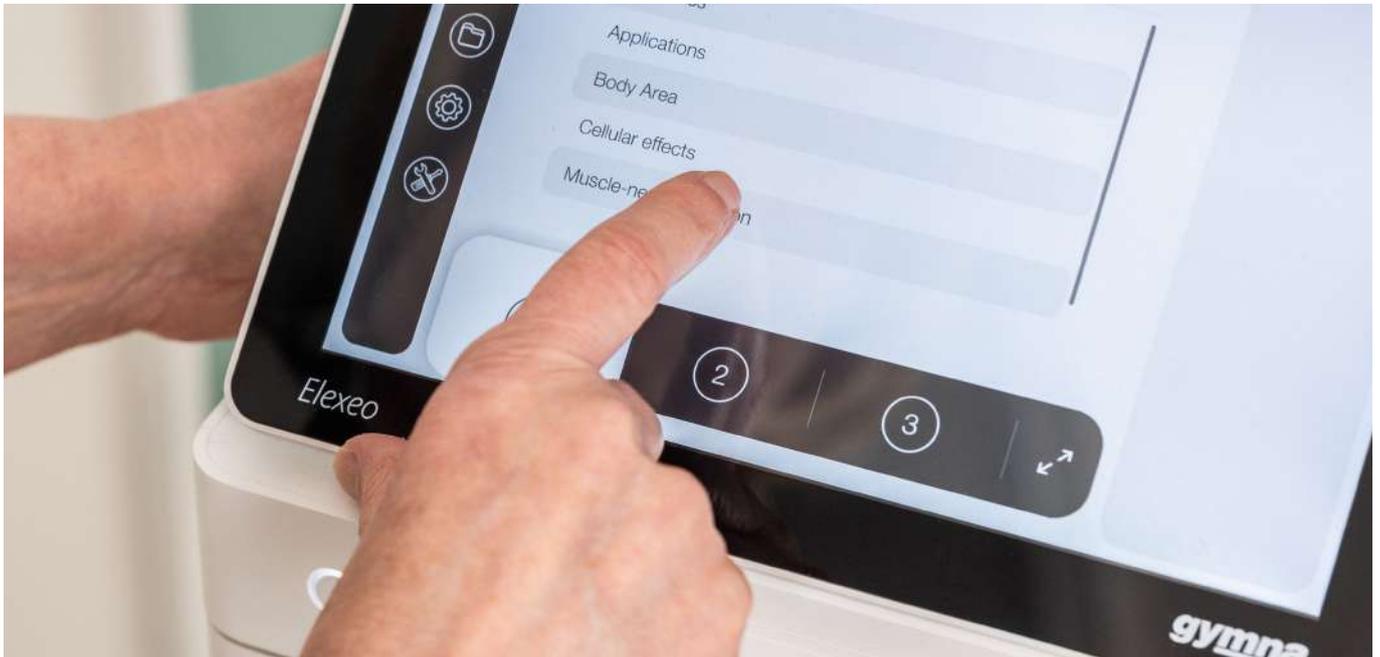

## **Modular & future-ready**

With Elexeo, you build a platform that perfectly matches your treatment philosophy. Start simple and expand when your practice is ready. No unnecessary equipment, no wasted investments - just maximum efficiency.

## **Treat where it's needed – without boundaries**

Thanks to the battery module, Elexeo is fully mobile. Whether you're working in multiple treatment rooms, at patients' homes, or on the sports field – you always retain full functionality without compromises.

The smart, portable design makes mobile treatments simple and efficient.

## User-friendly & fast

Less setup, more treatment. Don't waste valuable time on complex settings. The clear 10-inch touchscreen, plug-and-play modules, and intuitive interface get you started in one smooth motion – without delays or hassle.

## Smart functions, instantly available

Treatment programs directly accessible.

Contraindication application guide for safe use

Tailored clinical support

Anatomical library with 91 regions and instructional videos

Automatic and intelligent detection of connected modules

Touchscreen navigation as smooth as your smartphone

## Hygienic, clinical & durable

Elexeo is built for intensive daily use. The robust casing and high-quality components ensure reliability – every single day.

The fully glass front panel is seamless, low-maintenance, and easy to clean – ideal for any clinical setting. Less downtime, lower costs, and more time for what matters: your patient.

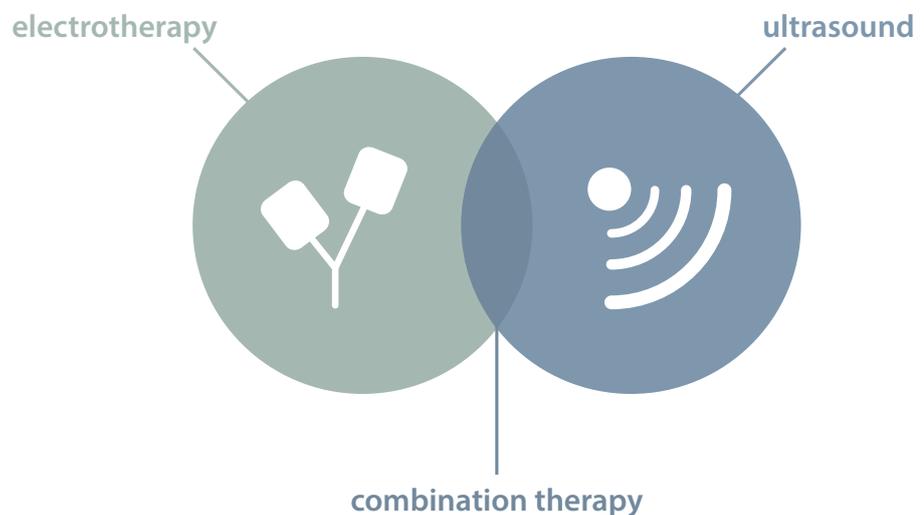

## 3 proven therapy applications in one device

Elexeo supports **electrotherapy, ultrasound,** and **combination therapy** – each with pre-programmed treatment protocols to help you get started quickly.

Add the Vaco module to place electrodes quickly and comfortably using vacuum technology. This enhances patient comfort.

Proven therapies in one compact and intuitive device: reliable, powerful, and ready for any treatment challenge.

# Tailored therapy solutions

Modular options, suited  
to your practice..

Thanks to Elexeo's modular concept, you can start with a basic setup and expand step by step with additional modules.

Elexeo is built around a powerful base unit with a touchscreen, includes the internal power supply, and comes standard with one therapy application.

With the innovative **plug-and-play system**, you easily add extra modules. No hassle – just maximum flexibility.

# Choose your own starting point – the base unit

## ET control unit

The beating heart of your therapy system

The *electrotherapy control unit* is designed for advanced neuromodulation and neurostimulation, including TENS, NMES, and microcurrent. The powerful 2-channel unit supports all standard waveforms and programs for muscle-nerve assessment, giving you one flexible platform for a wide range of treatment methods.

Thanks to the modular setup, the control unit effortlessly powers all connected Elexeo modules, and you operate the full system via the high-quality 10-inch capacitive touchscreen. Fully compatible with all modules, so you can always expand and adapt to your practice's needs.

## US control unit

Top-level therapeutic ultrasound

The *ultrasound control unit* is specially designed for therapeutic ultrasound and offers two completely independent ultrasound channels, allowing you to perform multiple treatments simultaneously. You have access to both conventional ultrasound as well as LIUS and LIPUS, opening the door to advanced treatment options for various musculoskeletal complaints.

The control unit powers all connected modules in your modular setup and lets you operate everything via the 10-inch capacitive touchscreen. Both large and small ultrasound heads are standard included, so you can reach every treatment surface optimally and get started right away. Both use the unique **DynamUS\* technology** for even more effective treatments.

# Plug-and-play modules

# Expand with your ideal configuration

## ET Module

This electrotherapy module offers exactly the same applications as the ET control unit.

With powerful neuromuscular electrical stimulation (NMES), TENS and microcurrent, you stimulate rapid muscle recovery and provide immediate pain relief where it's needed.

Suitable for muscle activation, pain relief and accelerated, optimised tissue healing.

- Together with the ET control unit, creates a powerful 4-channel electrotherapy setup
- Two fully independent channels
- Broad applicability for various patient profiles

## US Module

This ultrasound module offers exactly the same applications as the US control unit.

The large ultrasound head is included and features the unique **DynamUS\* functionality**.

For tissue regeneration, inflammation reduction, and deep heat treatments.

## Vaco module

Thanks to the 2-channel Vaco module with its quiet and powerful vacuum system, you can place electrodes quickly, easily and comfortably.

## Battery module

Thanks to the long battery life and smart design, you can use Elexeo whenever and wherever you need. Whether you're on the sports field, making house calls, or working in your practice – with the battery module, you always have the same functionality as in your treatment room. Ideal for physiotherapists who value flexibility and mobility.

## Gymna Mobile Fit

### an ergonomic workspace

A compact, ergonomic trolley designed for Eleexo, Gymna Ultrasound compact and Gymna Acure.

Comfortable to use, whether seated or standing. Integrated cable management keeps your workspace tidy and organized. The trolley comes with a handy drawer and bottle holder. Four smooth-rolling swivel wheels - two with brakes - ensure maximum manoeuvrability and stability.

The surface is easy to clean and disinfect, so you can always work hygienically..

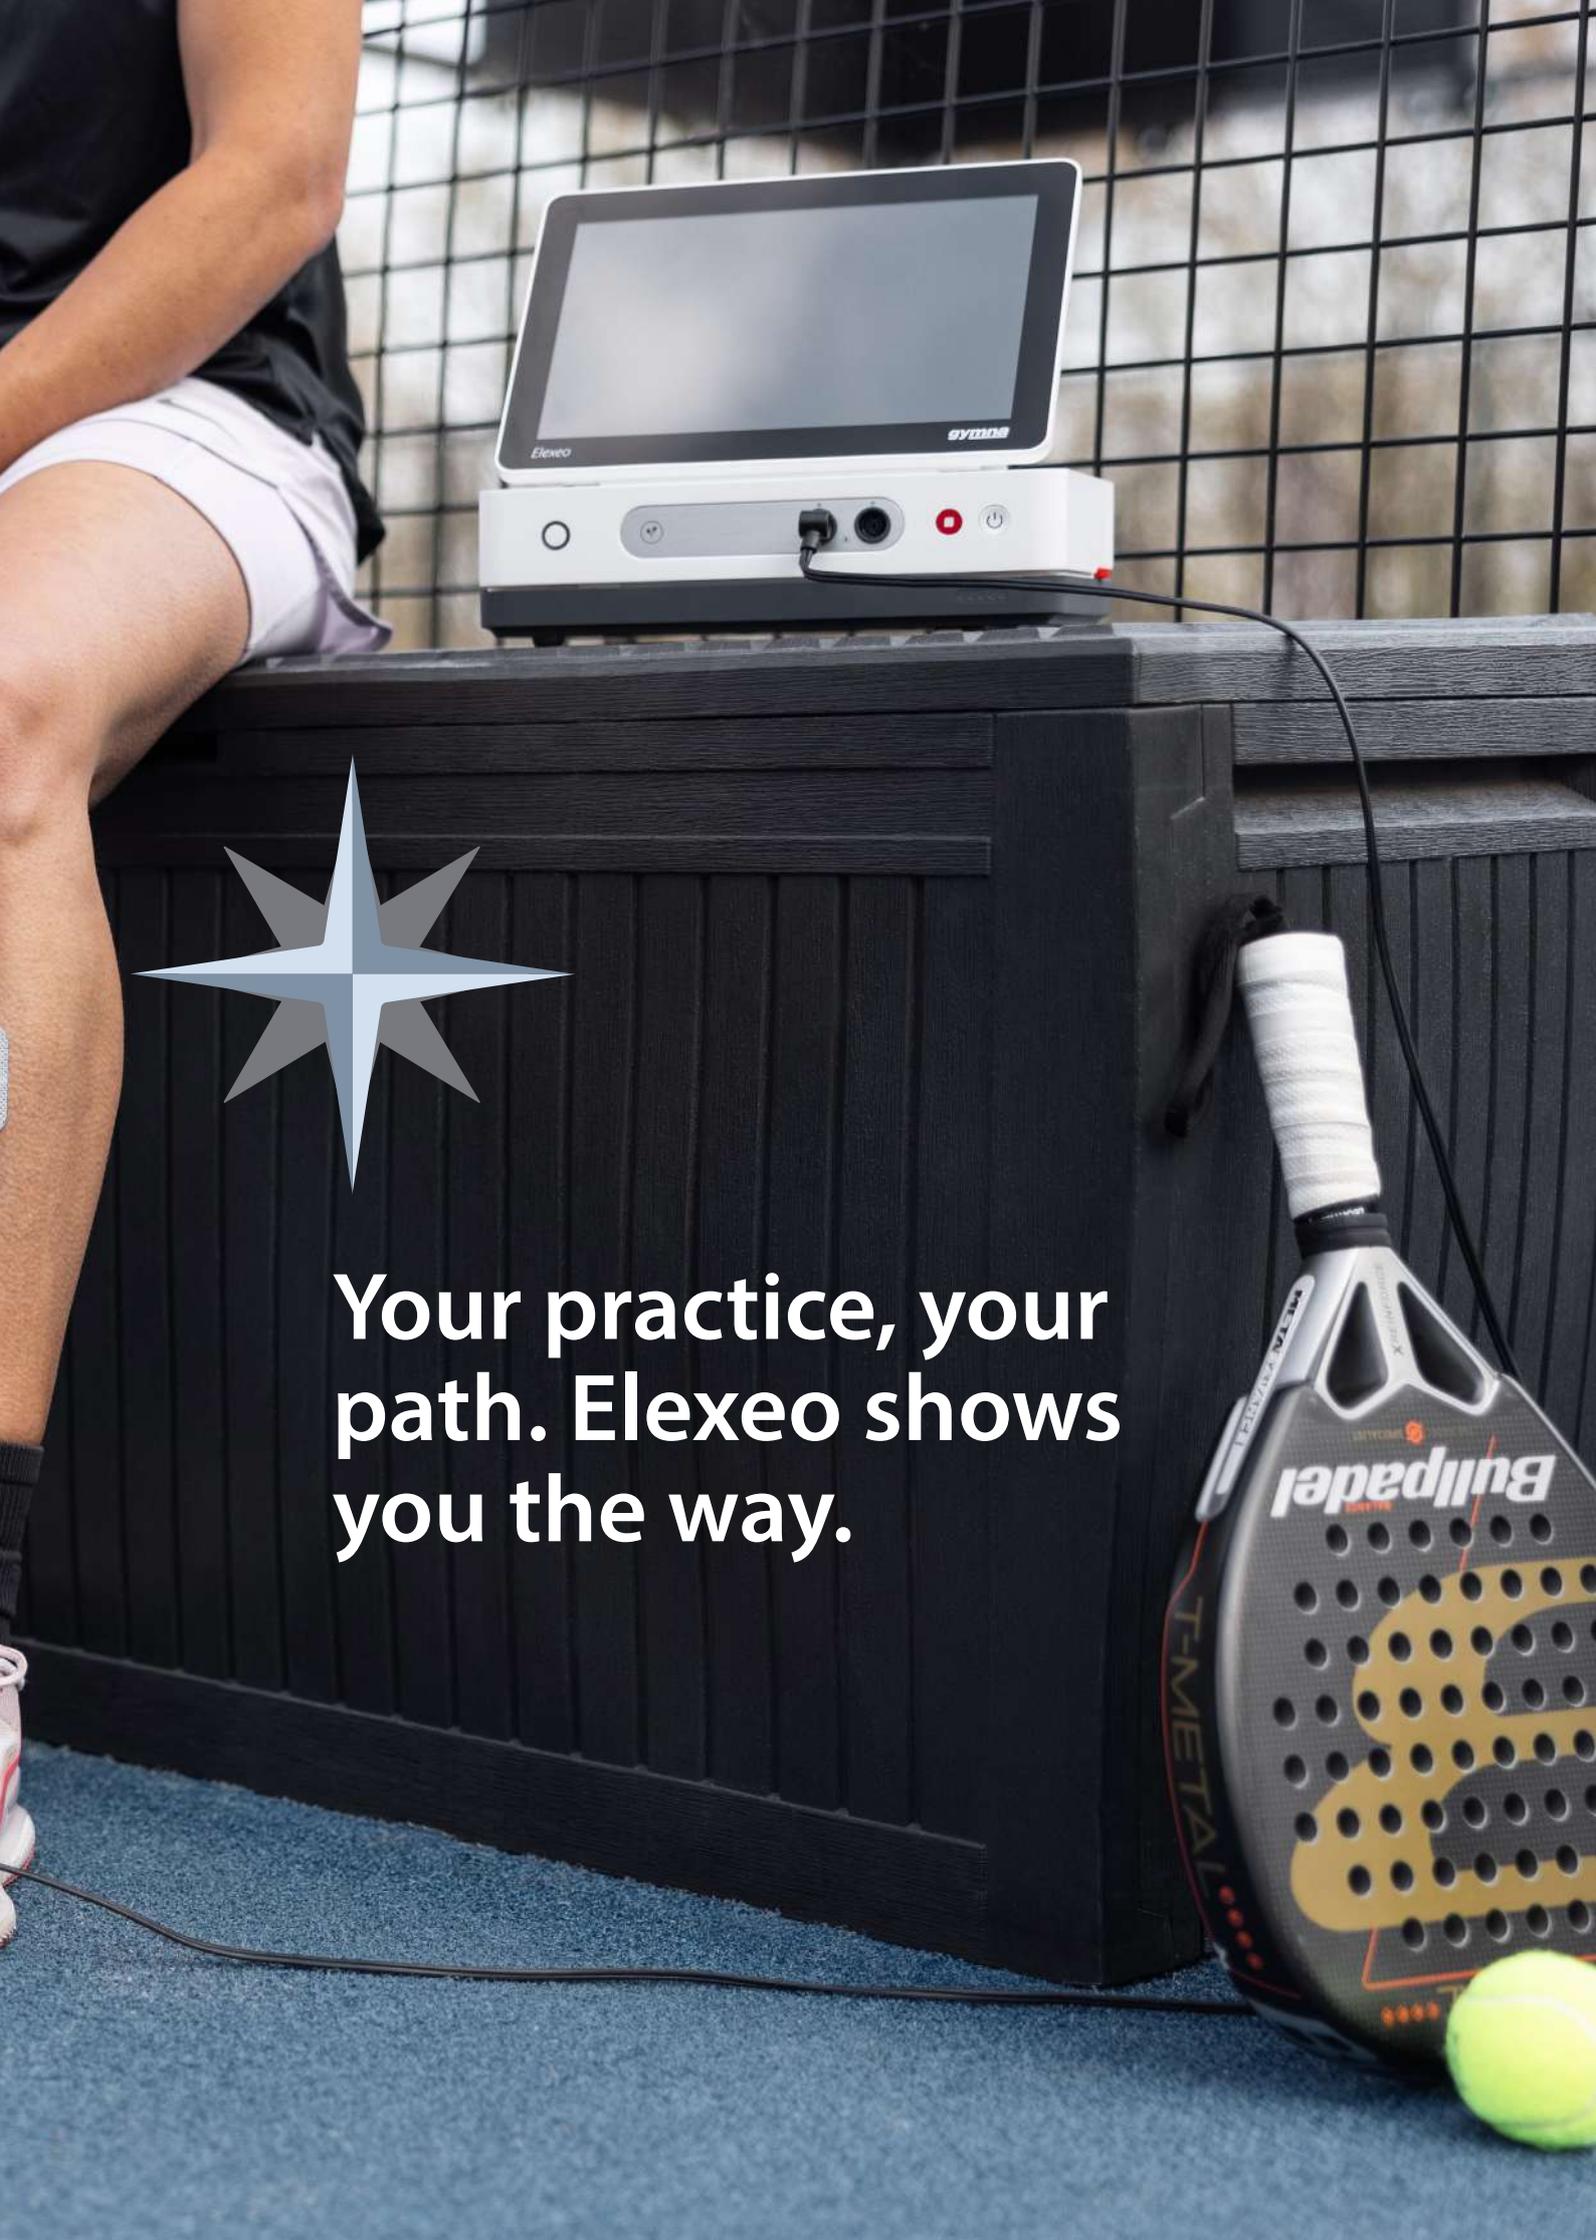

Delivered ready-to-use and expandable with an extra drawer or a holder plate for the ultrasound head.

# Your ideal Elexeo setup?

Discover it with the interactive Elexeo compass. Start with the treatment indications you often see in your practice and receive immediate advice on which modules suit your approach best.

Scan the **QR code** or visit **[elexeo.gymna.com](https://elexeo.gymna.com)**. Quickly and easily assemble a device that truly fits you.

**Your practice, your path. Elexeo shows you the way.**

# DynamUS

## Smart motion detection for optimal ultrasound treatments

Elexeo's ultrasound heads are equipped with DynamUS, Gymna's motion detection system that guides you during the treatment. It helps you maintain the right dynamic movement speed.

This user-friendly feature monitors how fast the ultrasound head moves across the patient's skin and provides direct LED feedback.

**Too fast:** ineffective treatment – orange LED stays on.

**Too slow:** risk of hotspots and internal tissue damage – orange LED blinks.

Your assurance of the optimal treatment technique.

# GTS - smart guidance for every treatment

The Guided Therapy System guides you through clinical reasoning to the most optimal treatment choice.

Via the user-friendly interface, you select the correct treatment program in just a few clicks. You focus on your patient – GTS takes care of parameters, settings and guidance.

This way, you treat your patients faster, more purposefully and with complete confidence.

## What GTS offers you:

Clinical information: directly linked to your selected application or treatment goal for well-informed execution.

Electrode placement: clear images show exactly where and how to place electrodes and accessories – for maximum precision and comfort.

Anatomical library: insightful information on musculoskeletal structures to support every treatment choice.

Technical guidance: step-by-step instructions for the selected therapy type, method and individual parameters.

How-to videos: practical instructions to get the most out of Elexeo and work as efficiently as possible during every treatment.

The result: with GTS, you work faster, more efficiently, and more effectively, while your patients benefit from targeted care and a professional approach.

Your smart partner in purposeful treatments.

# Dual-Modality- Workflows

## More results in less time

With Elexeo, you get the most out of your treatments thanks to **dual-modality workflows**. This lets you execute your treatment plan more efficiently and effectively.

1

**Combination therapy:** combine electrotherapy and ultrasound on the same injury for an enhanced therapeutic effect.

2

**Simultaneous therapy:** treat two different zones or applications at the same time and save valuable treatment time.

3

Add the **Vaco module** to place electrodes quickly and comfortably using vacuum technology. This enhances patient comfort.
